

# Working Prototype Known Problems Report

Product Name: recipR

Team Name: Sausage Party

Date: 11/29/17

## Problems with the software:

- API call limit at 50/day
- Load times are variable
- Entirely reliant on Spoonacular server, which can go down at times
- Searches are limited by Spoonacular database, which can return nothing if there are no recipes that match the search
- API key could be cancelled if call limit is exceeded
- On certain screen sizes, formatting is wrong
- No alert for failed searches
- Search bar disappears when expanding results in results table
- If there is only one result from the search, that result will be duplicated in the results table, and when one is clicked, all results will be expanded at the same time.
